

Helping businesses be seen on the internet in China

Many overseas websites load slowly, fail to open properly, or cannot be found at all when accessed from China. Access to China helps businesses solve those problems through, Chinese DNS and hosting, dynamic website delivery, WeChat integration, and supporting services for trading with China.

Start with website visibility

Why this matters

Being visible in China is not simply a matter of translating a website or adding a few keywords. Websites built outside China often rely on networks, DNS services, hosting locations, scripts, multimedia, and third-party tools that do not operate reliably in the Chinese internet environment.

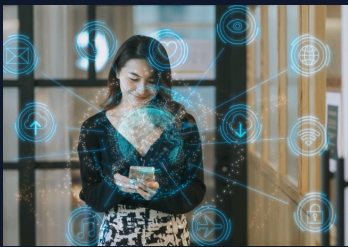

That means a website may appear to work normally outside China, while users in China see a slow page, a broken page, or nothing at all.

Typical problems

- Your domain name not found
- Website opens very slowly in China
- Blocked third-party services and scripts
- Missing multimedia, fonts, or pages
- Weak visibility from Chinese social media

How Access to China helps

Our services are built around one goal: helping your business become visible, accessible, and usable on the internet in China.

1. Test whether your website can be seen in China

Start by understanding what Chinese users actually experience. We test website visibility, identify blocked or missing content, and review how your site performs from inside China.

[Read more](#)

2. Improve your Chinese internet infrastructure

Website visibility depends on domain name lookup speed, hosting location, and network access. We provide Chinese NS/DNS, China-focused hosting, and data centre services to support reliable access.

3. Adapt your website for the Chinese internet

Our Dynamic Website Service helps businesses be seen in China without rebuilding their existing website. We also help connect websites to the WeChat environment for Chinese business use.

Make sure your domain name can be found in China

Most overseas domain names opened in China take two to three attempts to open.

People move on from look for a website after the first attempt

This is the most important task if you want your website to be seen in China

Locate products, components, manufacturers, and supply-chain support.

What visitors should understand

- We solve the practical problem of being seen on the internet in China.
- We offer both technical internet services and business support services.
- We help businesses start with the problem they have now, then move to the right solution.

Why businesses work with Access to China

Access to China brings together practical experience of the Chinese internet, website infrastructure, hosting, DNS behaviour, and business operations. The aim is not simply to explain the Chinese market, but to help businesses operate successfully within it.

For many companies, the first and most important step is simply finding out whether their website can really be seen in China.

Want to know more technically?

Understand what Chinese users see before changing DNS, hosting, or website content.
