

Helping businesses be seen on the internet in China

Many overseas websites load slowly, fail to open properly, or cannot be found at all when accessed from China. Access to China helps businesses solve those problems through website testing, Chinese DNS and hosting, dynamic website delivery, WeChat integration, and supporting services for trading with China.

In a recent test of foreign websites, only around 25% were accessible with acceptable performance. Around 20% took more than 20 seconds to load, and approximately 55% could not be accessed reliably. When we tested the top 100 UK companies' websites from China, only 14 were visible in China.

Why this matters

Being visible in China is not simply a matter of translating a website or adding a few keywords. Websites built outside China often rely on networks, DNS services, hosting locations, scripts, multimedia, and third-party tools that do not operate reliably in the Chinese internet environment.

That means a website may appear to work normally outside China, while users in China see a slow page, a broken page, or nothing at all.

Typical problems

- Slow or unreliable overseas DNS lookups
- Website hosting is too far from Chinese users
- Blocked third-party services and scripts
- Missing multimedia, fonts, or page resources
- Weak visibility inside Chinese business platforms

How Access to China helps

Our services are built around one goal: helping your business become visible, accessible, and usable on the internet in China.

1. Test whether your website can be seen in China

Start by understanding what Chinese users actually experience. We test website visibility, identify blocked or missing content, and review how your site performs from inside China. [Learn more](#)

2. Improve your Chinese internet infrastructure

Website visibility depends on domain name lookup speed, hosting location, and network access. We provide Chinese NS/DNS, China-focused hosting, and data centre services to support reliable access. [Learn more](#)

3. Adapt your website for the Chinese internet

Our Dynamic Website Service helps businesses be seen in China without rebuilding their existing website. We also help connect websites to the WeChat environment for Chinese business use. [Learn more](#)
